BASIC-ABSTRACT:

Dialkyl-4-hydroxy-phenyl-phosphine oxides are of formula (I) where R is alkyl gp. These cpds. are intermediates for the mfr. of heat and fire-resistant colouring materials, complexing agents, biologically active cpds. or fire- and heat-resistant phosphorylated phenol-formaldehyde resins. Cpds. (I) are prepd. in higher yield by reacting dialkyl-4-chlorophenyl-phosphine oxide with sodium methylate (II) in methanol at 150-170 degrees C in a sealed vessel.
